Since 1992, GLEC employees have provided federal, state, and local governments with a broad range of environmental consulting services focused on preserving and protecting aquatic resources and related habitat and biota. Government consulting remains a cornerstone of GLEC's continuous growth through our ongoing support of multiple government contracts involved with research, compliance, and regulatory development.

GLEC manages major contracts with EPA's Office of Water, the State of Michigan, and the U.S. Army concerned with the development of national water quality criteria standards, the protection of water and the environment through permitting and regulations, and determining the condition of our national water resource. The company has retained all of its government contracts through many competitive bidding cycles – a testament to GLEC's ability to meet the service levels demanded by government clients. GLEC also serves the research needs of smaller governmental organizations such as counties and municipalities, and related non-government organizations such as environmental non-profits, lake associations, and research non-profits.

GLEC's inter-disciplinary capabilities and contract experience makes us uniquely qualified to create and manage the complex project teams required to satisfy the broad scope and quality requirements of government projects. As a small business, we help satisfy small business contracting goals while providing administrative skills typical of larger firms.

- *There are no quality issues, and the Contractor has substantially exceeded the contract performance requirements without commensurate additional costs to the Government. Always friendly, receptive, responsive and very pleasant to work with. They offer good suggestions and clear explanations as appropriate.*
EPA Office of Water – HECD Contract Review 2006
- *The contractor has demonstrated an outstanding performance level that justifies adding a point to the score. It is expected that this rating will be used in those rare circumstances where the contractor achieved cost savings and performance clearly exceeds the performance levels described as "Excellent".*
EPA Office of Water – UCMR Contract Review 2005
- *"The staff anticipates potential problems and seeks to implement preemptive measures to ensure smooth operations. The company has surpassed contractual requirements and it has been a pleasure working with them."*
USDA Monitoring Programs Office – 2003 Contract Review
